
TAIYO -Temperature Controlled Impulse Type Band Sealer

TAIYO is the industry's first Impulse Band Sealer, combining the best properties of impulse sealer and constant heat sealer. It offers fast sealing speed without compromising nice and clean sealing finish. TAIYO has a built-in ONPUL(temperature control) system. Heating Temperature-Control Impulse Band Sealer With impulse technology, pre-heating process is not required. It only requires heat during the heating process and saves substantial energy cost. ONPUL helps sealer run at bare minimum heating, controlling the heating temperature over a prolonged period of time. Band Speed (at the maximum speed of 7 meters/min.) The constant heating type band sealer takes advantage of the property of continual heating process, which is the sealing "speed" after the heating area gets hot ready for the sealing (but NO cooling process). TAIYO, Fuji Impulse Band Sealer, has both merits of "Fast Speed" from belt sealer technology and "Clean Finish" from impulse technology. The seal speed is controled at 2 to 7 meters per minuite. Sealer with Built-in Printer Fuji offers the original printer designed for TAIYO as its option.

- Select one or two-line printing.
- Change the printing position according to your unique packaging materials.
- No Ink - Burns print tape with heated type.
- Change the print message by replacing the types.

Other voltages available on request.

Model	Voltage	Power Consumption	Weight	Voltage	Power Consumption	Weight
SE-SBTA131-1 0D (without printer)	AC100V 50/60Hz	1200 W	40KG			
SE-SBTA131-1 0W PP-BA (with printer)	AC100V 50/60Hz V	1380 W	50KG
