9 Install to the sealer

Since the methods of installing to the sealer differ by FEP-N1, FEP-OS-N1 and FEP-V-N1, please look at the procedure applicable to the model of your printer.

9-1 For FEP-N1

1 Open the pressure lever, and fit the drawing spring base into the seal frame.

2 Peel off the silver seal on the pressure lever.

3 Put the printer base on the pressure lever so that the heater section comes before the pressure lever.

4 Fix the printer base on the pressure lever by mounting bolt (M6 : 2pcs).

5 Loosen the plastic nut (black) which fix the teflon holder of a sealer.

6 Attach the type comtact plate on the teflon sheet holder plate(lower).

Since the attachment position(screw hole) is covered by the silver seal, please peel it.

7 Return the teflon sheet holder plate(lower) to the initial position.

8 Put the power cord(black) into the outlet for the printer.

The outlet is located on the upper back side of the sealer.

> ⚠ **Warning** Make sure not to put the white power cord plug into the outlet for the printer's power cord plug.

9 Secure the power cord plug to the pressure lever with the included plastic band to avoid its interfering with the movement of the pressure lever.
